Tech Data Veeam Cloud Connect on Azure

Release 1.0

Tech Data Veeam Cloud Connect on Azure

Tech Data Veeam Cloud Connect on Azure is an easy and efficient way to get backups off-site to Azure applying Veeam 3-2-1 backup rule of keeping one backup copy off site. It provides the features and flexibility of Veeam Cloud Connect software with security, high availability, and quality of service of Microsoft Azure – all bundled in a pay-per-use package directly available through Tech Data's Stream One Marketplace.

High Level Architecture

Solution Components [BOM]

Resource	Properties	Description
VM	1 VM	The VCC VM
OS Disk	1 Managed Disk SSD or HDD	The OS Disk is used for the Operating System of the Virtual Machine
VM Disk	Data Disk SSD or HDD	Data disk for backup Repository
Storage Account	1 Storage Account for boot diagnostic	This storage account is used to store diagnostics
Network Interface Card	1 NIC for the VM	The Network Interface Card is what connects the Virtual Machine to the Network Security Group
Network Security Group	1 NSG for the VM	The purpose of NSG is to restrict traffic from outside of the VNet to servers inside of the VNet. They are also used to restrict server to server communications inside the VNet.
IP Address	1 Public IP for the VM	IP address for the VM
Virtual Network	1 VNET	VNET for the routing and Inbound outbound port
